

LeaderKAM Kammprofile Gasket Style FL

Kammprofile Gaskets

DESCRIPTION

LeaderKAM kammprofile gaskets consist of a metallic core with machined concentric grooves. Both faces are produced with soft sealing layers consisting of either graphite, PTFE or LeaderTHERM NXT 1010 (modified Phlogopite).

APPLICATION

(Petro-) Chemical Industry, Steam, On- and Offshore exploration, pipeline systems, pressure vessels, heat exchangers and coolers. LeaderKAM Kamprofile gaskets have proven records in demanding application with heat-exchangers with fluctuating and cycling process conditions. Superb alternative for metal jacketed gaskets.

CHEMICAL COMPATIBILITY

LeaderKAM kammprofile Gaskets are suited for a wide variety of media, e.g. a pH range varying from 0-14. Temperature range from -450 °F up to 850 degrees °F (steam 1200 °F) with graphite layers. Mica layers can withstand temperatures of 1800 °F.

DELIVERY OPTIONS

All dimensions in a wide variety of materials are possible. Available for standard and non-standard equipment gaskets. EN10204 3.1 certificates can be delivered on request, as well as NACE MR0175/ISO 15156 conformity statement.

TEMPERATURE

Temperature range from -450 °F up to 850 degrees °F (steam 1200 °F) with graphite layers. LeaderTHERM (phlogopite) layers can withstand temperatures of 1800 °F. Application/compatibility guide is available on request.

APPROVALS & CERTIFICATES

- TA-Luft
- BAM
- EN10.204 3.1

SEALING CHARACTERISTICS

- Excellent sealing characteristics for a wide range of seating stresses
- Suitable for low torque flange-constructions
- High pressure and temperature range
- Broad chemical resistance (pending on the metallic materials and sealing layers)
- Firesafe
- Design suitable for fluctuating temperatures and pressures
- blow out safe

TECHNICAL DATA			
max Temperature [°F]	See material table below		
max Pressure [psi]	ASME B16.5 2500 Class		
Minimum initial stress [DIN E 2505 part 2] [N/mm2]	15		
Maximum initial stress [DIN E 2505 part 2] [N/mm2]	300		
M-Value	2		
Y- Value [psi]	2500		
Gasket required flange roughness [Ra micron]	3,2-6,3		
Gasket required flange roughness [RMS]	125-250		
max Seating stress [Qsmax bei RT EN13555] [n/mm2]	500
